

Cartridge heaters

Cartridge heaters can to specific areas give very high power and are used mainly for tool heating. Thanks to the design the heat is quickly distributed over the whole envelope surface of the element and the elements fulfil high demands of impact resistance and vibration security

>> Type of heating

Tools with hole matching H7

>> Material

Stainless steel

>> Dimension

Ø3, 6.5, 8, 10, 12.5, 16, 20 mm
Inactive section app. 10 mm at the connection end and appr. 5 mm at the other end.

>> Fields of application

Tool heating for e.g. plastic- rubber-, wood- and paper industry
Equipment for medical technical and laboratory industry
Braking systems
Foundries

>> Connection

12" Fibreglass Heater cable
Flexible Conduit
2 Pin
Nickle Wire

>> Types

Standard range
Acc. to customer specification

>> Others

We also have cartridge heaters with water proof seeling build in thermo element
